

2.制作录入窗体

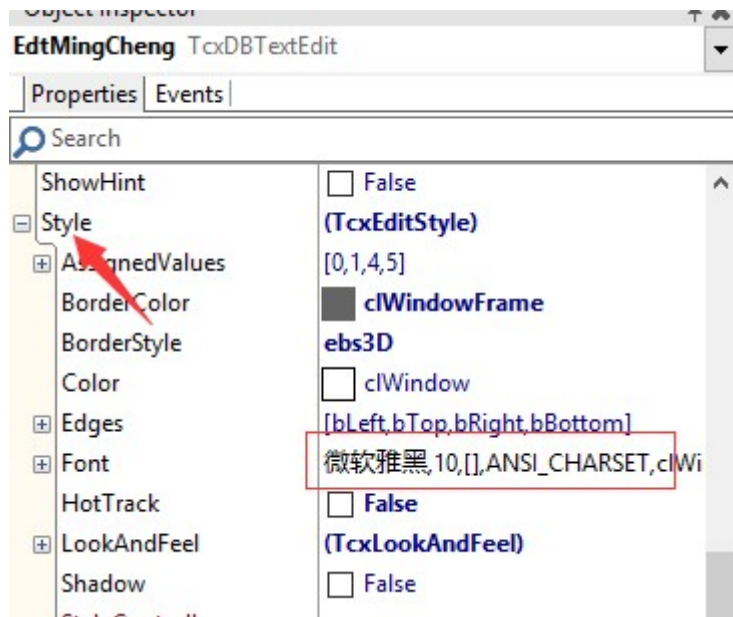

效果如图

● 使用控件:

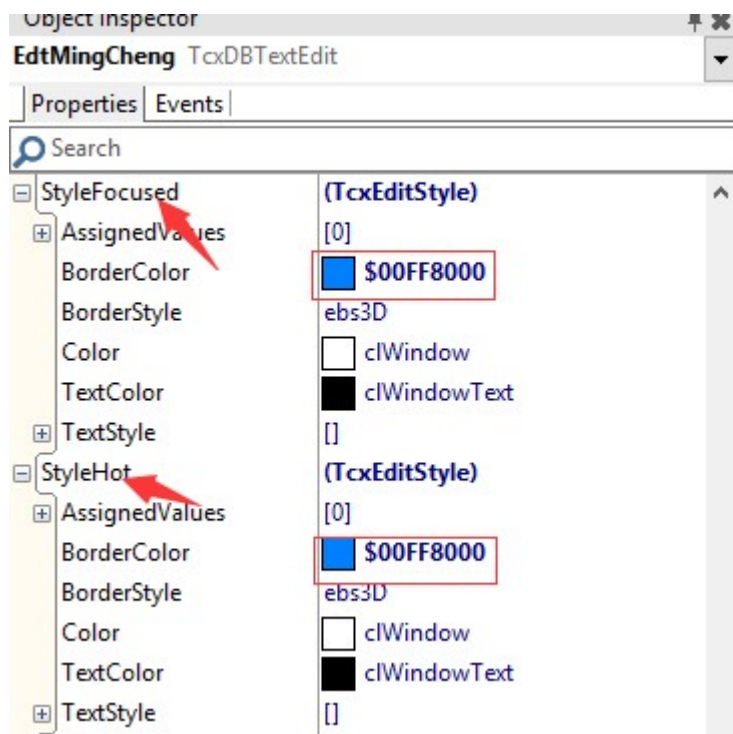

● 制作方法

1. 字体设置：雅黑，10 号

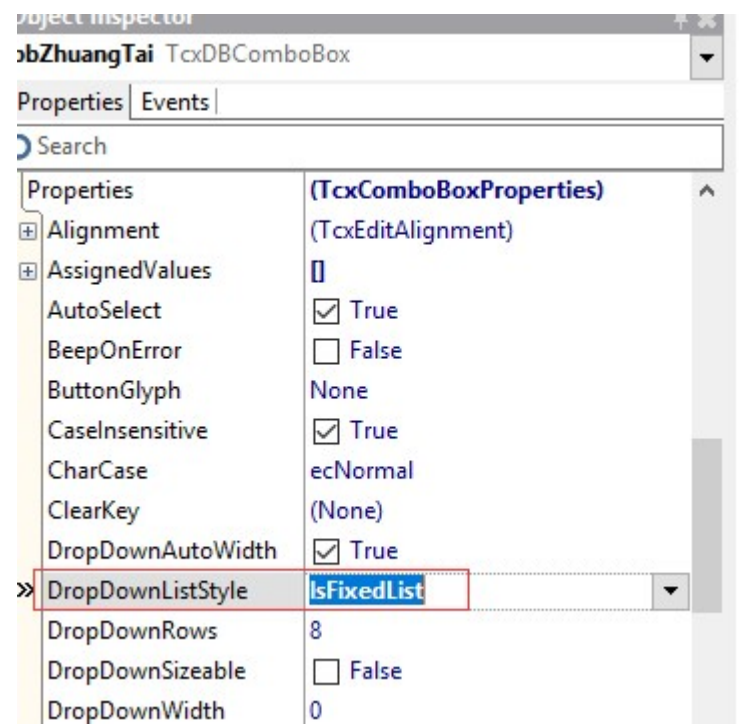

2. 设置边线样式，在鼠标移动到控件上时改变颜色，同时获取焦点的时候边框颜色也改变。颜色为\$00FF8000

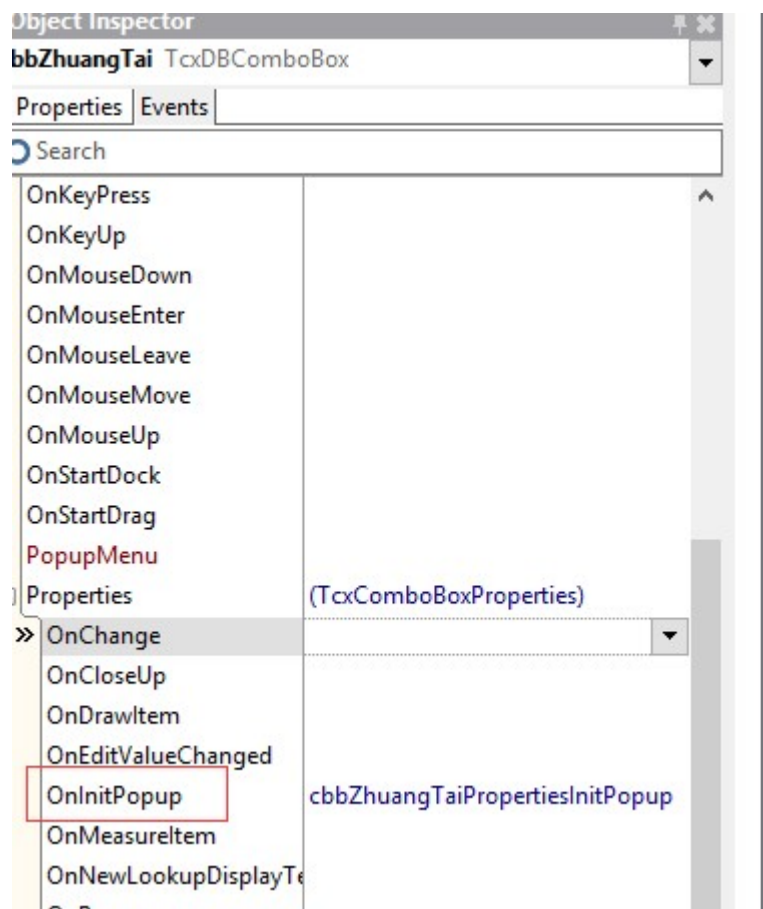

3. 依次复制，同时添加 TcxComboBox，并同上方法设置样式。

4. 设置下拉框的样式:

5.动态生成下拉选项 Items:

代码如下:

```
procedure TFraInputCrmKeHu.cbbZhuangTaiPropertiesInitPopup(Sender: TObject);
const
    sql_t: string = ' SELECT      *    from CrmBase Where type=zs ';
var
    i: integer;
begin
    with Sender as TcxDBComboBox do
    begin
        Properties.Items.Clear;
        with DmCrm.cdTemp do
        begin
            Close;
            CommandText := Format(sql_t, [quotedstr(Hint)]);
            Open;
            for i := 0 to RecordCount - 1 do
            begin
                Properties.Items.Add(FieldByName('mc').AsString);
                Next;
            end;
        end;
    end;
end;
```
